Taras Lutsiuk

Profile

I am from Ivano-Frankivsk, Ukraine. Currently, my main job is selling Stihl products. In my free time I improve my Java programming language skills. On my site you can see open projects in which I participated, as well as learn more about me. I am currently looking for a job as an trainee/junior Java developer.

Skills

-Work with Java, Spring Boot, Hibernate, Thymeleaf, Linux (Raspbian), Maven, GIT, IDEA, HTML, CSS, JS, Bootstrap, MySQL, Azure, Github actions

- Responsive, flexible, strictly following agreements and deadlines. Striving toward continuing professional development in IT.

Experience / IT related educational practice

In 2020, I started to improve my Java programming. During the Java Advanced course at the Academy of IT Clusters, my colleague and I developed an interactive conference assistant program, which I deployed in the Azure cloud service.

Project description: The essence of the project was to create a Spring Boot web application that will ask questions, view already asked questions and increase the rating of already asked questions at conferences with a large audience, where questions are difficult to hear from the speaker or other listeners without additional equipment. dynamics). The administrative part was entrusted to me.

In early 2020, I decided to write a bot telegram to simplify the search for Stihl products for buyers and sellers of the store where I work. This bot combines the ability to quickly find current prices for goods. The bot also knows how to search for a product by name and searches for a list of similar products, and if necessary, calculates a discount. This bot inspired me to improve my Java programming skill.

In 2019, I started learning Java at the Academy of IT Clusters, worked with IDEA and GIT, where I wrote my first project. The idea of the project was to create private and public chat rooms. I also studied SQL and Java courses at Sololearn.

In 2012, I worked as a system administrator at Ivano-Frankivsk University of Oil and Gas. My responsibilities included troubleshooting the computer system, installing and configuring new hardware and software.

Education

MS in Computer Systems and Networks Engineering in the Oil and Gas Industry,
Faculty of Information Technologies. (2012)

College of Electronic Devices IFNTUOG. (2008)
